

Give your AI something to work with

Context that sticks. A link anyone can open.

Week 6 · Learn, Vibe, Build · October 5, 2026

Demo 1 • copy the lesson

- Copy the lesson markdown into your AI.
- Ask: "Teach me this and quiz me."
- Check its explanation against the lesson.

Markdown is just a text file

- A .md file is plain text, with headings and lists.
- You can read it. Your AI can read it.
- Context can live in a file instead of your memory.

Context that sticks

- Claude Code loads CLAUDE.md at session start.
- Cursor and other coding tools can load AGENTS.md.
- In a chat app: paste the file or add it to a Project.

One small example

```
# Hill Plant Swap
```

```
A one-page website for a free monthly plant  
swap on the Hill, near CU.
```

```
It's for first-year students who are nervous  
about going.
```

```
Keep it plain HTML and CSS. No JavaScript.
```

```
Only use the facts in docs/event-facts.md.
```

```
Never make up dates or places.
```

Plain words. Nothing
fancy.

Demo 2 · ask again

- Ask about the small project, cold.
- Add the short context file. Ask again.
- Start a fresh session: does it still know?

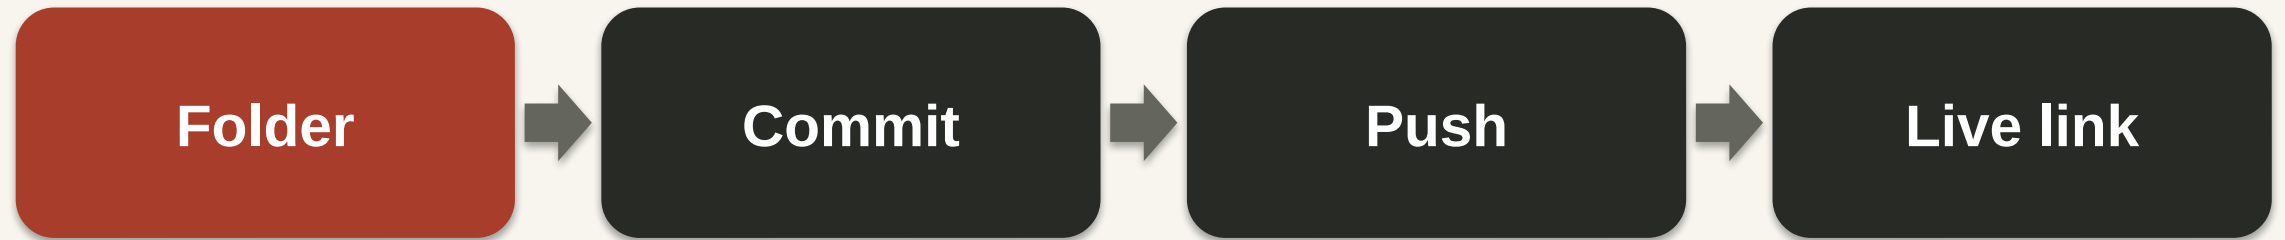

A link someone else can open

```
file:///Users/you/Desktop/index.html  
Only on your laptop.
```

```
https://you.github.io/project/  
A published website.
```

Your laptop isn't the
internet.

Save. Send. Publish.

- Commit: a save point on your laptop.
- Push: send it to GitHub.
- Deploy: turn it into a live website.

Demo 3 · getting online

- GitHub Desktop: create, commit, publish.
- GitHub → Settings → Pages → main → Save.
- Open the live link on a phone.

Next week: your AI reaches your tools

- API: one program asking another for something.
- Connector: your AI reaches your tools directly.
- Instead of you pasting. Next week we'll connect.

This week's reading: your AI as a coach

- Arielle Shipper · How to Get Better at AI by Asking AI
- Give your AI examples of how you've worked.
- Ask it to teach you one next step.

Studio: build

- Work on your project.
- Optional: ask your AI what it needs to know.
- Save that context as a markdown file.
